# DIGITAL LITERACY PROJECT REPORT

**NAME – JEET BISWAS**

**REGISTRATION NO. – 25MIM10181**

**BRANCH – INTEGRATED MTECH AI**

**YEAR – 1 st YEAR**

**COURSECODE – CSE0001**

**DATE – 30.03.2026**

This Digital Literacy project was designed to prompt students like ourselves to use digital tools directly and appreciate their relevance, while utilizing them correctly. Providing feedback to help my peers navigate these platforms and utilize them to build a web presence safely (free from problems like fraud, etc.) was the most easy and suitable way that resonated with me as a Student Ambassador, one of the primary efforts in this regard.

There are five main areas of this project:

- Creating infographics (personal digital portfolio project)
- Beginning to learn about coding
- Using collaboration tools
- Improving professional communication skills
- Gaining awareness about cybercrime

So through this journey, I was able to grow my communications skills and also sharpened on online safety while working with GitHub like platforms.

**TASK 1**

**This Digital Literacy project is designed to understand students like us in the proper use of these digital tools and also how you apply digital literacy skills appropriately in the 21st century. I was appointed as a Student Ambassador, where I had to navigate through different platforms and give them useful feedback which help my peers know her native environment, establishing their presence on the internet while doing so securely without being a victim like fraud/fish.**

**This project can be broken down into five distinct areas:**

- **Creating infographics (building digital portfolios)**
- **Getting the hang of coding**
- **Using collaboration tools**
- **Improving professional communication skills**
- **Gaining awareness about cybercrime**

**I have improved my ability to communicate and better understood online safety from working with many platforms including GitHub.**

**TASK 2**

**For task 2 I had created profiles on various digital platforms like LinkedIn, Kaggle and GitHub. Traditional Use: Continuing Education and Professional Development Students often use these digital portfolios to highlight their proficiencies and network about future opportunities.**
**I have also created a profile README with information about myself and my learning objectives. LinkedIn is a great tool for establishing professional connections, so I've also put my education and begun working on that (I have barely made headway with LinkedIn this month). In this example you are seeing some NLP task which is a data science and machine learning oriented platform where I have tried exploring Kaggle.**
**In the next four years, I will utilize these platforms to share my projects and reach out to professionals in the environment at large. I will be able to build a strong portfolio and increase the chances of success in my next projects.**

**TASK 3**

**For the task, I chose to explore coding and collaboration tools. Finally, I went on HackerRank and solved a beginner-level problem to get an idea of how this kind of coding challenges works. It allows them to work on their programming regularly through a number of problems.**
**I also developed a Digital Literacy Awareness Quiz with 5 questions using Google Forms. It consisted of multiple-choice and short-answer questions. Plus, I further reviewed the answers with Google Sheets, a helpful data organization and interpretation tool.**
**This has been a great activity as throughout it, I have learned about useful tools for school. Coding platforms shall help me hone my problem-solving skills and Google forms will also serve to create surveys, quizzes, collect data for projects.**

**TASK 4**

**One manifestation of unsuccessful digital communication is when a set of students used a WhatsApp chatting channel to coordinate an activity and then failed to establish proper deadlines. Some members thought the due date for submissions was one week later than it actually is, while others thought it was earlier. This was demystified as bad, or lack of communication. The group missed the official deadline as a result, incurring penalties and tensions among members. The problem was due to informal communication and lack of clear role and responsibilities.**

**It just shows how important it is to keep things professional and use formal communication like email or a shared document that mentions tasks and deadlines clearly. If a structured tool like Google Docs or Trello had been used to divvy up responsibilities, no one would have ever been left out of the loop and coordination would have improved.**

**TASK 5**

**During my research on phishing, I was most surprised by how similar fake websites and emails can be to the real thing. At some point it gets very hard to distinguish between them. Phishers prey on users' sense of urgency and fear, and even the most cautious can be lulled into falling for such techniques. I also learned that even small mistakes, like clicking on a link before checking the URL of the website being visited, can have tragic consequences. In an effort to minimize my risk of encountering such fraud, I intend to form habits whereby I verify per link and request for UPI transactions, as well enable two factor authentication on all accounts. This study allowed me to understand more about the fact that cybersecurity is important not only for devices but also requires human awareness as well as taking responsibility for their use.**

## CONCLUSION

**This Digital Literacy project was a pretty meaningful learning experience for me. It made me realize the essence of digital understanding and how to leverage it, not just for studies but at a later stage in work ventures.**
**I thoroughly enjoyed this project as I learned how to create content digitally, build a professional online presence and integrate coding with many of the different tools available on the web. It also helped me understand cyber threats and how to stay secure on the internet better. The most important was now I can use these learnings on what am doing at the moment and for future.**
**Overall, I like to think that I have gained confidence and responsibility in the use of digital technologies through this project.**
